PREMIUM WORK WEAR

SAFETY

Aarco Uniforms dba FORGE is proud to be a leading provider of Work Wear - FR, Non FR and Hi-Vis workwear keeping workers safe from an array of thermal hazards. We're not just a supplier, we're your partner and that's how we approach worker protection.

We invest in research that leads to innovative FR technology to keep workers safe and comfortable. We use proprietary engineering to create unmatched performance and to continuously improve protection, comfort and value. We test well beyond minimum standards as your garments have to work in the real-life applications.

NFPA 2112 – STANDARD ON FLAME-RESISTANT GARMENTS FOR PROTECTION OF INDUSTRIAL PERSONNEL AGAINST FLASH FIRE.

This standard specifies the minimum performance requirements and test methods for Flame resistant fabrics and components, and the design and certification requirements for garments developed to protect workers from a flash fire hazard.

NFPA 70E

Standard for Electrical Safety in the Workplace The National Fire Protection Association (NFPA) 70E is a comprehensive standard that establishes best electrical safety practices standards on how to protect workers from electric arc flash and arc blast exposure and resulting potential injury and death.

There are 4 Arc Hazard Risk Categories under NFPA 70E defined by the ATPV ratings:

AMERICAN NATIONAL STANDARD FOR HIGH - VISIBILITY SAFETY APPAREL

ANSI/ISEA 107:2015 provides performance requirements for conspicuous materials to be used in HVSA and specifies minimum amounts of background, retroreflective and combined-performance materials, colors and placement of materials for garments, supplemental items and accessory items used to enhance the visibility and safety of workers.

NFPA 2112 requires Flame Resistant fabrics to pass a comprehensive battery of thermal tests, including the following:

ASTM D6413 – Vertical Flammability test for 12 seconds

Original state and after 100 laundry cycles: Maximum two seconds after flame and four-inch char length allowed

ASTM F2700 – Heat Transfer Performance (HTP) test
Minimum HTP of 6 cal/cm² spaced and 3 cal/cm² contact

Heat Resistance

Fabric must not melt or drip, separate or ignite after 5 minutes exposure in a 500°F or 260°C oven

Thermal Shrinkage test

Fabric must not shrink more than 10% after 5 minutes exposure in a 500°F or 260°C oven

ASTM F1930-11 – Instrumented Mannequin test

Maximum 50% predicted body burn (second and third degree burns) after 3 second flame and heat exposure averaging 83 kW/m² (2.0 cal/cm² sec).

ASTM F1506, Standard performance specification for flame resistant textile materials for wearing apparel for use by electrical workers exposed to momentary electric arc and related thermal hazards.

This specification outlines the minimum requirements of fabric to be met before being assigned the "Arc Rated" title. Under this specification **ASTM F1506**, a number of tests are performed:

- Arc Flash test as per ASTM F1959 – Arc Thermal Performance Value (ATPV) / Energy Breakopen Threshold (EBT50)
- Color fastness to Laundering
- Dimensional Change
- Breaking Strength, Tear Strength, Yarn Slippage (wovens)
- Bursting Strength (knits)

ASTM F2621 is a garment evaluation test. This is done after the fabric

has been tested. The garment is exposed to an arc flash at approximately the level of the arc rating of the fabric.

The ANSI/ISEA 107:2015 establishes three types of garments:

Type O (off-road), For non-roadway use, where workers are not exposed to highway traffic or temporary traffic control zones. Type O HVSA is Performance Class 1.

Type R (roadway), For use where workers are exposed to traffic from public access highway rights-of-way or roadway temporary traffic control zones. Type R HVSA may be Performance Class 2 or 3.

Type P (public safety), For emergency and incident responders and law enforcement personnel who are exposed to struck-by hazards in roadway or off-road work environments.

These garments provide additional options addressing competing hazards or the need for access to special equipment. Type P HVSA may be Performance Class 2 or 3.
